**Question No:1****(Marks:1)****Vu-Topper RM**

Which of the following is the correct code to instantiate the object of given template vector class of int type?

```
Template< class T >
```

```
Class vector {
```

```
};
```

- A. Vector int obj;
- B. Vector obj<>int;
- C. Vector<int> obj;**
- D. Vector obj ;<int>;

**Question No:2****(Marks:1)****Vu-Topper RM**

Which of the following represents complete specialization?

- A. Template < int, char >**
- B. Template < class T, float>
- C. Template< class , class W>
- D. Template <class T. class U.int>

**Question No:3****(Marks:1)****Vu-Topper RM**

Which of the following is known as Dereference operator in C++?

- A. +
- B. \***
- C. &
- D. ::

**Question No:4****(Marks:1)****Vu-Topper RM**

Which of the following is the correct syntax for passing two type argument to a template?

- A. Template <type T.type U>
- B. Template < type T, type U>
- C. Template Typename < T,U >
- D. Template < typename T, typename U>**

**Question No:5**

**(Marks:1)**

**Vu-Topper RM**

Which will be the primary task or task of generic programming?

**A. All of given**

B. Build concrete models of the concept

C. Implement generic algorithms based on the concept

D. Categorize the abstractions in a domain into concepts

**Question No:6**

**(Marks:1)**

**Vu-Topper RM**

Which of the following can be passed as type argument to template?

A. Primitive type

B. User defined types `

**C. Both**

D. None of the given options

**Question No:7**

**(Marks:1)**

**Vu-Topper RM**

Which of the following statement is true about partial specialization?

A. None of the given

B. Class template cannot have partial specialization

C. Function templates cannot have partial specialization

**D. Both class templates and function template can have partial specialization.**

**Question No:8**

**(Marks:1)**

**Vu-Topper RM**

The parameters given in temple definition other than those used for mentioning templates types are called

A. Type Parameters

**B. Non-Type parameters**

C. Default Type Parameters

D. None of the given option

**Question No:9**

**(Marks:1)**

**Vu-Topper RM**

In case of template specialization, if compiler cannot find required complete specialization, then it searches for some

A. General template

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

- B. None of the given
- C. Complete template
- D. Partial specialization**

**Question No:10**

**(Marks:1)**

**Vu-Topper RM**

Which of the following is the correct way to define a template class X?

- A. Template class C{ }
- B. Typename class X{ }
- C. Class < typename T>class X{ }
- D. Template < typename T> classX{ }**

**Question No:11**

**(Marks:1)**

**Vu-Topper RM**

May inherit from a complete specialization

- A. All**
- B. Ordinary class
- C. Partial specialization
- D. Complete specialization

**Question No:12**

**(Marks:1)**

**Vu-Topper RM**

In statement “template<class t.classU.intI=5>”. then non-type parameters is \_\_\_\_\_.

- A. int I**
- B. Class T
- C. Class U
- D. All of the given option

**Question No:13**

**(Marks:1)**

**Vu-Topper RM**

In resolution order compiler search first \_\_\_\_\_.

- A. Generic template
- B. Ordinary function**
- C. Partial specialization
- D. Complete specialization

**For More Help Contact What's app 03224021365**

**Question No:14**

**(Marks:1)**

**Vu-Topper RM**

\_\_\_\_\_ class is a single class that provides functionality to operate on different type of data?

- A. Friend
- B. Ordinary
- C. Template**
- D. None of the give options

**Question No:15**

**(Marks:1)**

**Vu-Topper RM**

Methodologies to the development of reusable software relate to \_\_\_\_\_.

- A. None of the given
- B. Structure programming
- C. Generic programming**
- D. Procedural programming

**Question No:16**

**(Marks:1)**

**Vu-Topper RM**

A template argument is preceded by the keyword \_\_\_\_\_.

- A. Class**
- B. Type\*
- C. Vector
- D. Template

**Question No:17**

**(Marks:1)**

**Vu-Topper RM**

Each \_ of a template class by default becomes function template.

- A. Object
- B. Date member
- C. Type parameter
- D. Member function**

**Question No:18**

**(Marks:1)**

**Vu-Topper RM**

In resolution order, highest priority is given to \_\_\_\_\_ in template specialization.

- A. General template
- B. Partial specialization

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

### C. Complete specialization

D. None of the given options

**Question No:19**

**(Marks:1)**

**Vu-Topper RM**

In order to define a class template, the first line of definition must be:

A. Class<template t>

B. Typename <template T>

**C. Template <type nameT >**

D. Template Class <class name >

**Question No:20**

**(Marks:1)**

**Vu-Topper RM**

Which of the following may inherit from the ordinary class?

A. Class template `

**B. All of given option**

C. Partial specialization

D. Complete specialization

**Question No:21**

**(Marks:1)**

**Vu-Topper RM**

In c++ generic programming is done using

A. Packages

**B. Templates**

C. Procedures

D. None of the given

**Question No:22**

**(Marks:1)**

**Vu-Topper RM**

Which of the following represents partial specialization?

A. Template < int, char >

B. Template < class T, Type t>

**C. Template<classT,classu,int>**

D. Template< typename T, class W>

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

**Question No:23**

**(Marks:1)**

**Vu-Topper RM**

To make a pure virtual, we need to give after () of this function.

**A. =0;**

B. =1;

C. Null;

D. None of the given

**Question No:24**

**(Marks:1)**

**Vu-Topper RM**

A class template \_\_\_\_\_.

**A. Facilitates reuse of class**

B. Does not support static members

C. Dose not facilitates reuse of class

D. Does not support generic methods

**Question No:25**

**(Marks:1)**

**Vu-Topper RM**

We can change behavior of template using \_\_\_\_\_.

A. Class Templates

B. Function parameters

**C. Template parameters**

D. none of the given options

**Question No:26**

**(Marks:1)**

**Vu-Topper RM**

A template provides a convenient way to make a family of

**A. Functions and classes**

B. Classes and exceptions

C. Programs and algorithms

D. Variables and data members

**Question No:27**

**(Marks:1)**

**Vu-Topper RM**

When we specialize a function template, it is called \_\_\_\_\_.

A. Function overriding

B. Function overloading

C. Function template overriding

**D. Function template overloading**

بري صحبت سے تتهائي بهتر ہے اور تتهائي سے نيك صحبت بهتر ہے

**For More Help Contact What's app 03224021365**

**Question No:28**

**(Marks:1)**

**Vu-Topper RM**

It is good practice to avoid \_\_\_\_ objects to treat polymorphically.

**A. Array**

B. Public

C. Private

D. Protected

**Question No:29**

**(Marks:1)**

**Vu-Topper RM**

Consider the code below.

Class class1 { Protected: Int I; }; Class class2: private calls 1{ };

A. Public

**B. Private**

C. Protected

D. None of these

**Question No:30**

**(Marks:1)**

**Vu-Topper RM**

Consider the following two lines of code written for a class Student, Student subj1; 2. Student subj2(subj1) which constructor of student class will be called?

A. Default constructor of student class

**B. Copy constructor of student class**

C. Both default and copy constructor of student class

D. No constructor will be called

**Question No:31**

**(Marks:1)**

**Vu-Topper RM**

\_\_\_\_\_ binding means that target function for a call is selected at run time.

A. Code

B. Static

C. Both

**D. Dynamic**

بري صحبت سے تتهائي بهتر ہے اور تتهائي سے نيك صحبت بهتر ہے

**For More Help Contact What's app 03224021365**

**Question No:32**

**(Marks:1)**

**Vu-Topper RM**

Template<> class Vector{ void\*\* p; //... void\*& operator[] ((int i); };

**A. This specialization can then be used double type pointers.**

B. This specialization should be used for Vectors of all type int types.

C. This specialization can then be used as the all-type implementation for one type classes.

D. This specialization can then be used as the common implementation for all Vectors of pointers.

**Question No:33**

**(Marks:1)**

**Vu-Topper RM**

In private inheritance derived class pointer can be assigned to base class pointer in,

**A. Main function**

B. None of the these

C. In base class member and friend functions

D. In derived class member and friend functions

**Question No:34**

**(Marks:1)**

**Vu-Topper RM**

Which statement will be true for concrete class?

**A. It can be instantiated**

B. It cannot be instantiated

C. None of the these

D. It implements an virtual concept.

**Question No:35**

**(Marks:1)**

**Vu-Topper RM**

Target of a \_\_\_\_\_ function call is determined at run time.

**A. Virtual**

B. Instance

C. Operator

D. None of given

بري صحبت سے تتهائي بهتر ہے اور تتهائي سے نيك صحبت بهتر ہے

**For More Help Contact What's app 03224021365**

**Question No:36**

**(Marks:1)**

**Vu-Topper RM**

The Specialization pattern after the name says that this specialization is to be used for every\_\_\_.

- A. Data types
- B. Meta types
- C. Virtual types
- D. Pointer's type**

**Question No:37**

**(Marks:1)**

**Vu-Topper RM**

C++ dynamic binding and polymorphism will be achieved when member function will be \_\_\_.

- A. Public
- B. Private
- C. Virtual**
- D. None of these

**Question No:38**

**(Marks:1)**

**Vu-Topper RM**

Consider the code below, class class1 { protected: void func1(); }; class class2 : public class1 { }; Function func1 of class1 is \_\_\_ in class2,

- A. Public
- B. Private
- C. Protected**
- D. None of the given options

**Question No:39**

**(Marks:1)**

**Vu-Topper RM**

Consider the code below, class class1 { protected: int i; }; class class2 : protected class1 { }; Then int member i of class1 is \_\_\_ in class2,

- A. Public
- B. Private**
- C. Protected
- D. None of the given options

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

**Question No:40**

**(Marks:1)**

**Vu-Topper RM**

Consider the code below , class class1 { private: void func1(); }; class class2 : private class1 { }; Function func1 of class1 is \_\_\_\_ in class2,

- A. Public
- B. Private
- C. Protected

**D. None of the given options**

**Question No:41**

**(Marks:1)**

**Vu-Topper RM**

Consider the following statements: 1) int iArray[5]; 2) int \*pArr = iArray;

- A. None of given options
- B. Error in first statement

**C. Error in second statement**

D. These statements will compile successfully

**Question No:42**

**(Marks:1)**

**Vu-Topper RM**

If there is a pointer, p, to objects of a base class, and it contains the address of an object of a derived class, and both classes contain a virtual member function, ding(), then the statement p->ding(); will cause the version of ding() in the \_\_\_\_ class to be executed.

**A. Base**

- B. Virtual
- C. Derived
- D. Implemented

**Question No:43**

**(Marks:1)**

**Vu-Topper RM**

A class template may inherit from another class template.

**True**

False

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

**Question No:44**

**(Marks:1)**

**Vu-Topper RM**

Two functions with same names, parameters and return type can exist in,

- A. Function overriding
- B. Operator overloading
- C. None of these options
- D. Function overloading**

**Question No:45**

**(Marks:1)**

**Vu-Topper RM**

An abstract class is useful when

- A. No classes should be derived from it.
- B. No objects should be instantiated from its.**
- C. There are multiple paths from one derived class to another.

**Question No:46**

**(Marks:1)**

**Vu-Topper RM**

Select correct line of code for composition relationship between

“Keyboard” class and “Keys” class

- A. Class keyboard : private keys
- B. Class keyboard { Keys type;};
- C. Class keys{ KeyBoard type;};
- D. Class keys: private KeyBoard**

**Question No:47**

**(Marks:1)**

**Vu-Topper RM**

Select correct line of code for inheritance relationship between “Keys” class and “SpecialKeys” class. “Keys” is parent class while

“SpecialKeys” is child class

- A. Class Keys: public SpecialKeys
- B. Class SpecialKeys:: public Keys
- C. Class Keys:: public SpecialKeys
- D. Class SpecialKeys: public Keys**

**Question No:48**

**(Marks:1)**

**Vu-Topper RM**

User can make virtual table explicitly.

**True**

False

**Question No:49**

**(Marks:1)**

**Vu-Topper RM**

A function call is resolved at run-time in \_\_\_\_\_

- A. Virtual member function
- B. Both non-virtual member
- C. Virtual member function**
- D. Non-virtual member function

**Question No:50**

**(Marks:1)**

**Vu-Topper RM**

Which of the following function can convert a class into an abstract class?

- A. Virtual function
- B. Abstract function
- C. Concrete function
- D. Pure virtual function**

**Question No:51**

**(Marks:1)**

**Vu-Topper RM**

A class hierarchy shows the same relationships as an organization chart.

- A. Describes “has a” relationships.
- B. Describes “is a kind of” relationships.**
- C. Shows the same relationships as a family tree.

**Question No:52**

**(Marks:1)**

**Vu-Topper RM**

Consider the code below, class class1 { public: int i; }; class class2 : public class1 { }; Then int member i of class1 is \_\_\_\_\_ in class2,

- A. Public**
- B. Private
- C. Protected
- D. None of the given options

بري صحبت سے تتهائي بهتر ہے اور تتهائي سے نيك صحبت بهتر ہے

**For More Help Contact What's app 03224021365**

**Question No:53**

**(Marks:1)**

**Vu-Topper RM**

Consider the code below, class c1 { }; class c2 : public c1 { }; class c3 : public c2 { }; Then c1 is,

- A. Direct base class of c3
- B. Direct base class of c2
- C. Direct child class of c2
- D. Direct child class of c3**

**Question No:54**

**(Marks:1)**

**Vu-Topper RM**

A class can inherit from more than one class is called.

- A. Single inheritance
- B. Simple inheritance
- C. Double inheritance
- D. Multiple inheritances**

**Question No:55**

**(Marks:1)**

**Vu-Topper RM**

Which of the following is not type of inheritance in c++?

- A. Public
- B. Private
- C. Protected
- D. Restricted**

**Question No:56**

**(Marks:1)**

**Vu-Topper RM**

In resolution order of function template, compiler searches for in the end

- A. Generic template
- B. Partial specialization
- C. Complete specialization**

**Question No:57**

**(Marks:1)**

**Vu-Topper RM**

When we want to have exactly identical operations on different data type, are used

- A. Function Overriding
- B. Function Template**

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

## C. Function Overloading

**Question No:58**

**(Marks:1)**

**Vu-Topper RM**

The default inheritance mode is,

- A. Public inheritance
- B. Private inheritance**
- C. Protected inheritance
- D. None of these options

**Question No:59**

**(Marks:1)**

**Vu-Topper RM**

It is illegal to make objects of one class members of another class

**True**

False

**Question No:60**

**(Marks:1)**

**Vu-Topper RM**

When we create objects, then space is allocated to:

- A. Data member
- B. None of given**
- C. Access specifier
- D. Member function

**Question No:61**

**(Marks:1)**

**Vu-Topper RM**

There is only one form of copy constructor.

True

**False**

**Question No:62**

**(Marks:1)**

**Vu-Topper RM**

Which of the following features of OOP is used to deal with only relevant details?

- A. Object**
- B. Abstraction
- C. Information hiding

بري صحبت سے تتهائي بهتر ہے اور تتهائي سے نيك صحبت بهتر ہے

**(Marks:1)**

**Vu-Topper RM**

\_\_\_\_\_ Binding means that targets function for a call is selected at compile time. Static

- A. Dynamic
- B. Automatic
- C. None of given
- D. Class hierarchy**

**Question No:64**

**(Marks:1)**

**Vu-Topper RM**

In C++, we declare a function virtual by preceding the function header with keyword "Inline

**True**

False

**Question No:65**

**(Marks:1)**

**Vu-Topper RM**

Derived class can inherit from public base class as well as private and protected base classes

**True**

False

**Question No:66**

**(Marks:1)**

**Vu-Topper RM**

A function template must have a parameter

**True**

False

**Question No:67**

**(Marks:1)**

**Vu-Topper RM**

Child class can call constructor of its,

- A. Direct base class**
- B. Indirect base class
- C. Both
- D. None of the these

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**Question No:68**

**(Marks:1)**

**Vu-Topper RM**

Adding a derived class to a base class requires fundamental changes to the base class.

**True**

False

**Question No:69**

**(Marks:1)**

**Vu-Topper RM**

A Class or class template can have member \_\_\_\_\_ that are themselves templates.

A. Objects

B. Variable

**C. Function**

D. None of given

**Question No:70**

**(Marks:1)**

**Vu-Topper RM**

Which will be the Primary task or tasks of generic programming?

**A. All of given**

B. Build concrete models of the concepts

C. Implement generic algorithms based on the concepts

D. Categorize the abstractions in a domain into concepts

**Question No:71**

**(Marks:1)**

**Vu-Topper RM**

A class D can be derived from a class C, which is derived from a class B, which is derived from a class A.

**True**

False

**Question No:72**

**(Marks:1)**

**Vu-Topper RM**

The user must define the operation of the copy constructor.

**True**

False

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

**Question No:73**

**(Marks:1)**

**Vu-Topper RM**

Template functions use \_\_\_\_\_ than ordinary functions.

- A. Greater Memory
- B. Lesser Memory**
- C. Equal Memory

**Question No:74**

**(Marks:1)**

**Vu-Topper RM**

Compiler performs \_\_\_\_\_ type checking to diagnose type errors,

- A. Static**
- B. Bound
- C. Dynamic
- D. Unbound

**Question No:75**

**(Marks:1)**

**Vu-Topper RM**

Which of the following is/are advantage[s] of generic programming?

- A. Writability
- B. Reusability
- C. All of given**
- D. Maintainability

**Question No:76**

**(Marks:1)**

**Vu-Topper RM**

Vectors contain contiguous elements stored as a[an] \_\_\_\_\_.

- A. Array**
- B. Variable
- C. Function

**Question No:77**

**(Marks:1)**

**Vu-Topper RM**

Algorithms can only be implemented using STL containers.

True

**False**

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

**Question No:78**

**(Marks:1)**

**Vu-Topper RM**

Inheritance is a way to organize data.

- A. Pass arguments to objects of classes.
- B. Improve data-hiding and encapsulation.

**C. Add features to existing classes without rewriting them.**

**Question No:79**

**(Marks:1)**

**Vu-Topper RM**

We can use "this" pointer in the constructor in the body and even in the initialization list of any class if we are careful,

**True**

False

**Question No:80**

**(Marks:1)**

**Vu-Topper RM**

Default constructor is such constructor which either has no -----or if it has some parameters these have ----- values

- A. Null, Parameter
- B. None of the given
- C. Parameter, default**
- D. Parameter, temporary

**Question No:81**

**(Marks:1)**

**Vu-Topper RM**

Which of these are examples of error handling techniques?

- A. All of the given**
- B. Return the illegal
- C. Graceful Termination
- D. Abnormal Termination

**Question No:82**

**(Marks:1)**

**Vu-Topper RM**

Destructor can be overloaded

True

**False**

بري صحبت سے تنهائي بهتر ہے اور تنهائي سے نيك صحبت بهتر ہے

**Question No:83**

**(Marks:1)**

**Vu-Topper RM**

Identify the correct way of declaring an object of user defined template class A for char type members?

A obj;

**A obj;**

**Question No:84**

**(Marks:1)**

**Vu-Topper RM**

Which of the following causes run time binding?

A. Abstract class

B. Declaring object

**C. None of the given**

**Question No:85**

**(Marks:1)**

**Vu-Topper RM**

The type that is used to declare a reference or pointer is called its ---

A. Static type

B. Default type

C. Abstract type

**D. Reference type**

**Question No:86**

**(Marks:1)**

**Vu-Topper RM**

By default, assignment operator (=) performs,

A. Copy data

B. Deep copy

**C. Shallow copy**

**Question No:87**

**(Marks:1)**

**Vu-Topper RM**

In case of dynamic memory allocation in a class we should use,

A. User defined copy constructor

B. User defined default constructor

**C. User defined assignment operator**

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

**Question No:88**

**(Marks:1)**

**Vu-Topper RM**

Which of the following types of Inheritance is used to model  
“Implemented in terms of” relationship?

Public

**Private**

**Question No:89**

**(Marks:1)**

**Vu-Topper RM**

Binding means that target function for a call is selected at compile time.

Code

**Static**

**Question No:90**

**(Marks:1)**

**Vu-Topper RM**

Function overriding is done in context of,  
Single class

**Derived and base classes**

**Question No:91**

**(Marks:1)**

**Vu-Topper RM**

Consider the code below, class c1 { }; class c2 : public c1 { }; class c3 :  
public c2 { }; Then c2 is,

**Direct base class of c3**

Direct child class of c3

**Question No:92**

**(Marks:1)**

**Vu-Topper RM**

Static casting is?

**C++ way of calling base class function from derived class**

Explicit way of calling base class functions from derived class

**Question No:93**

**(Marks:1)**

**Vu-Topper RM**

If we have not given any constructor for the class, compiler generates  
which of the following constructors?

**Implicit Default Constructor**

بری صحبت سے تہائی بہتر ہے اور تہائی سے نیک صحبت بہتر ہے

**For More Help Contact What's app 03224021365**

**Question No:94**

**(Marks:1)**

**Vu-Topper RM**

We can call base class assignment operator in derived class user defined assignment operator,

**Using both of these options**

**Question No:95**

**(Marks:1)**

**Vu-Topper RM**

In Private Inheritance the public members of base class become

\_\_\_\_\_ in derived class.

**Private**

**Question No:96**

**(Marks:1)**

**Vu-Topper RM**

In c++ by default access of classes is \_\_\_\_\_.

**Private**

**Question No:97**

**(Marks:1)**

**Vu-Topper RM**

We can have \_\_\_\_\_ type of member functions in a class.

**All**

**Question No:98**

**(Marks:1)**

**Vu-Topper RM**

Consider the code below,

```
class class1 { Private:
```

```
Void func1();
```

```
};
```

```
Class class2 :
```

```
public class1 { };
```

Function func1 of class 1 is in class2.

**Private**

**Question No:99**

**(Marks:1)**

**Vu-Topper RM**

We can access private members of the class from outside the class using

\_\_\_\_\_ operator with its object pointer.

**&**

**Question No:100** (Marks:1) **Vu-Topper RM**  
Suppose Person is a user defined class. In statement “Person \* pPtr”,  
static type of pPtr is \_\_\_\_\_.

**Pointer**

**Question No:101** (Marks:1) **Vu-Topper RM**  
In Protected Inheritance the public members of base class become  
\_\_\_\_\_ in derived class.

**Protected**

**Question No:102** (Marks:1) **Vu-Topper RM**  
A parent class can call constructor of its child class through,

**Cannot call the constructor of its child class**

**Question No:103** (Marks:1) **Vu-Topper RM**  
A Child class can call constructor of its parent class through,

**Its constructor initialization list**

**Question No:104** (Marks:1) **Vu-Topper RM**  
Sender of the message does not need to know the exact class of receiver  
in \_\_\_\_\_.

**Polymorphism**

**Question No:105** (Marks:1) **Vu-Topper RM**  
In c++, compiler can generate which of the following operators' code,

**==**

**Question No:106** (Marks:1) **Vu-Topper RM**  
Which of the following is TRUE,

**Derived class pointer can be used as Base class pointer**

**Question No:107** (Marks:1) **Vu-Topper RM**  
Public Inheritance represents,

**“IS A” relationship**

**Question No:108** (Marks:1) **Vu-Topper RM**  
Friend Functions of a class are \_\_\_\_\_ members of that class.  
**None of the these**

**Question No:109** (Marks:1) **Vu-Topper RM**  
A class with no pure virtual function is a \_\_\_\_\_ class.  
**Concrete**

**Question No:110** (Marks:1) **Vu-Topper RM**  
If the user does not specify the type of inheritance, then the default type of inheritance is \_\_\_\_\_.  
**Private inheritance**

**Question No:111** (Marks:1) **Vu-Topper RM**  
Which of the following is NOT casting operator in C++ standard?  
**var\_cast**

**Question No:112** (Marks:1) **Vu-Topper RM**  
In case of public inheritance, protected members of base class will be \_\_\_\_\_ in derived class?  
**Protected**

**Question No:113** (Marks:1) **Vu-Topper RM**  
Which of the following access specifier ensures that base class member is accessible in derived class of this base class and NOT outside of this class?  
**Protected**

**Question No:114** (Marks:1) **Vu-Topper RM**  
In case of protected inheritance, public members of base class will be \_\_\_\_\_ in derived class?  
**Protected**
