

## MTH632 MID TERM SOLVED MCQS

([VISIT VURANK FOR MORE](#))

---

### Module # 001

|    |  |
|----|--|
| 1. | Complex Analysis related to complex numbers and their functions. We have different types of numbers: Integers, Rational Number i.e. $\mathbb{Q} = \{\frac{a}{b} : a, b \in \mathbb{Z}, b \neq 0\}$ , Irrational Numbers that cannot be written as a ratio of two integers. |
| 2. | The decimal expression is non-terminating and non-periodic.  |
| 3. | Real Numbers: Union of rational and irrational numbers are called real numbers i.e. $\mathbb{R} = \mathbb{Q} \cup \mathbb{Q}'$   |
| 4. | Real numbers are not enough to solve our all problems if we consider an equation $x^2+2x+2=0$ then we need complex numbers.  |

|    |   |
|----|---|
| 5. | By including $i$ we get numbers of the form $a + ib$ : $a, b \in \mathbb{R}$ and such numbers are called complex numbers.                                   |
| 6. | “Cardano” was first to introduce complex numbers $a + \sqrt{-1} b$ into algebra but had misgivings about them.  |
| 7. | “Rafael Bombelli authored l’Algebra (1572 and 1579) a set of three books “At first , the things seemed impossible, but I searched until I found the proof”. |
| 8. | L.Euler (1701-1783) introduced the notation $i = \sqrt{-1}$   |

### Module # 002

|     |  |
|-----|--|
| 9.  | A complex number $z$ can be defined as an ordered pair $z=(x,y)$ where $x,y$ are real numbers.                               |
| 10. | Complex numbers can be interpreted as points in the complex plane.   |
| 11. | Real numbers is a subset of complex numbers.   |
| 12. | When real numbers $x$ are displayed as points $(x,0)$ on the real axis the set of complex numbers includes all real numbers. |
| 13. | Complex numbers of the form $(0,y)$ corresponds to $y$ -axis and are pure imaginary numbers when $y \neq 0$ .                |
| 14. | For complex number $z=(x,y)$ the real numbers $x,y$ are known as the real and imaginary parts of $z$ respectively.           |
| 15. | Two complex numbers $z_1$ and $z_2$ are equal whenever they have the same real parts and the same imaginary parts.           |
| 16. | The statement $z_1=z_2$ means that $z_1$ and $z_2$ corresponds to same point in the complex plane or $z$ -plane.             |
| 17. | Let $z_1=(x_1,y_1)$ , $z_2=(x_2,y_2)$ then $z_1=z_2$ iff $x_1=x_2$ and $y_1=y_2$ .   |

### Module # 003

|     |   |
|-----|---|
| 18. | Two ways to represent complex numbers are Addition of Complex numbers and Product of Complex numbers.   |
| 19. | Commutative Law w.r.t Addition and Associative Law w.r.t Addition holds in Complex Numbers.   |
| 20. | <b>Addition of two complex numbers:</b> For $z_1=(x_1,y_1)$ , $z_2=(x_2,y_2)$ the addition is defined as $z_1+z_2=(x_1+x_2, y_1+y_2)$ .               |
| 21. | <b>Product of two complex numbers:</b> For $z_1=(x_1,y_1)$ , $z_2=(x_2,y_2)$ the product is defined as $z_1.z_2=(x_1x_2 - y_1y_2, x_1y_2 + y_1x_2)$ . |
| 22. | Any complex number $z=(x,y)$ can be written as $z=(x,y)=(x,0)+(0,y)$  |

|     |  |
|-----|--|
| 23. | Any complex number $z=(x,y)$ can be written as $z=(x,y)=(x,0)+(0,y)$ , Also we have $(0,1)(y,0)=(0,y)$ so<br>The numbers of the form $(x,0)$ are real numbers so can simply denoted by $x$ , numbers of the form $(0,y)$<br>number denoted by "i" then $z=(x,0)+(0,1)(y,0)=x+iy$ |
| 24. | $(0,1)$ is such a complex number when it is multiplied with itself then it gives -1. i.e $(0,1)(0,1)=(0,-1,0)$   |
| 25. | $Z=x+iy$ is used to represent the complex numbers and this representation is due to the mathematici  |

| <b>Module # 004</b> |  |
|---------------------|--|
| 26.                 | <p>Properties of Addition of Complex Numbers:</p> <ul style="list-style-type: none"> <li>i. The addition of complex numbers follows all the properties of real numbers.</li> <li>ii. <b>Additive Identity:</b> There is a unique complex number 'w' such that <math>z+w=w+z=z</math> such number<br/>complex number <math>z=x+iy</math> there is a unique <math>\xi</math> such that <math>z+\xi = 0</math>, obviously <math>\xi = -x - iy</math> and is know</li> </ul> |
| 27.                 | Complex numbers can be represented by two ways. i. Ordered pair representation ii. $z=x+iy$ form. O<br>foundational definition on which complex number system is built while $z=x+iy$ is used or preferred   |

| <b>Module # 005</b> |  |
|---------------------|--|
| 28.                 | <p>Properties of Multiplication of Complex Numbers:</p> <ul style="list-style-type: none"> <li>i. The product of complex numbers follows all the properties of real numbers.</li> <li>ii. The commutative law <math>z_1z_2=z_2z_1</math>. The commutative implies <math>iy=yi</math> so <math>z=x+iy</math> and <math>z=x+yi</math> are sa<br/>The associative law <math>z_1(z_2z_3)=(z_1z_2)z_3</math>. We can write <math>z_1z_2z_3</math> without parenthesis.</li> </ul> |

|     |   |
|-----|---|
|     | <p>iv. <b>Multiplicative Identity:</b> There is a unique complex number 'w' such that <math>zw=wz=z</math> such number is 1.</p> <p>iv. <b>Multiplicative Inverse:</b> For every complex number <math>z=x+iy</math> other than (0,0) there is a unique complex number <math>z^{-1}</math> such that <math>zz^{-1}=z^{-1}z=1</math>.</p> |
| 29. | Division of Complex numbers can be calculated using $\frac{z_1}{z_2} = \left( \frac{x_1x_2+y_1y_2}{x_2^2+y_2^2}, \frac{y_1x_2-x_1y_2}{x_2^2+y_2^2} \right)$   |
| 30. | <b>Distributive Law:</b> The Operation of multiplication is distributive over addition that is $z_1(z_2+z_3)=z_1z_2+z_1z_3$   |
| 31. | <b>Binomial Formula:</b> For any two complex numbers $z_1, z_2$ we have $(z_1+z_2)^n = \sum_{k=0}^n \binom{n}{k} z_1^k z_2^{n-k}$ for $n \in \mathbb{N}$  |

| <b>Module # 006</b> |  |
|---------------------|--|
| 32.                 | A complex number 'z' can be associated with the directed line segment or vector from origin to the point (x,y) in the complex plane. |
| 33.                 | Multiplication of two complex number is neither dot product nor vector product.  |
| 34.                 | The vector interpretation helps us defining modulus or absolute value of complex number.   |
| 35.                 | The modulus or absolute value of a complex number $z=(x,y)=x+iy$ is defined and denoted as $ Z  = \sqrt{x^2+y^2}$                    |

| <b>Module # 007-008</b> |   |
|-------------------------|---|
| 36.                     | Properties of modulus of a complex number: An important consequence of triangular inequality is $ z_1+z_2  \leq  z_1 + z_2 $  |
| 37.                     | The complex conjugate or simple conjugate of a complex number $z=x+iy$ is denoted by $\bar{z}$ and is given by $\bar{z}=x-iy$ |

| <b>Module # 008</b> |  |
|---------------------|--|
| 38.                 |  |
| 39.                 |  |

| <b>Module # 009</b> |  |
|---------------------|--|
| 40.                 |  |
| 41.                 |  |

| <b>Module # 010</b> |  |
|---------------------|--|
| 42.                 |  |
| 43.                 |  |

| <b>Module # 011</b> |  |
|---------------------|--|
| 44.                 |  |

|     |  |
|-----|--|
| 45. |  |
|-----|--|

|                     |  |
|---------------------|--|
| <b>Module # 012</b> |  |
|---------------------|--|

|     |  |
|-----|--|
| 46. |  |
|-----|--|

|     |  |
|-----|--|
| 47. |  |
|-----|--|

|                    |  |
|--------------------|--|
| <b>Module # 29</b> |  |
|--------------------|--|

|     |  |
|-----|--|
| 48. | Continuity means without any break or sudden jump or holes at any point. |
|-----|--|

|     |   |
|-----|---|
| 49. | If the small change in the input of a function brings to a small change in the output of that function th |
|-----|---|

|     |  |
|-----|--|
| 50. | <p>A function <math>f(x)</math> is continuous at a point <math>X_0</math> if <math>\square</math></p> <p><math>\lim_{x \rightarrow x_0} f(x)</math> Exists.</p> <ul style="list-style-type: none"> <li>• <math>f(x_0)</math> Exists.</li> <li>• <math>\lim_{x \rightarrow x_0} f(x) = f(x_0)</math></li> </ul> |
|-----|--|

|     |   |
|-----|---|
| 51. | A function is said to be continuous on a set A if it is continuous at each point of A.  |
| 52. | In order to calculate limit at a point $x_0$ function $f(x)$ must be defined in neighborhood of $x_0$ .   |
| 53. | The function $f(x) = \begin{cases} x^2+1 & x \leq 0 \\ x & x > 0 \end{cases}$ is continuous at $x=1$ but not continuous at $x=0$  |
| 54. | Let $U(x,y)$ be a real valued function of the two real variables $x$ and $y$ then $U$ is continuous at a point $(x_0, y_0)$ if <ul style="list-style-type: none"> <li>• <math>\lim_{(x,y) \rightarrow (x_0,y_0)} U(x,y)</math> Exists.</li> <li>• <math>U(x_0, y_0)</math> Exists.</li> <li>• <math>\lim_{(x,y) \rightarrow (x_0,y_0)} U(x,y) = U(x_0, y_0)</math></li> </ul> |
| 55. | The function $U(x,y) = \begin{cases} \frac{x^3}{x^2+y^2} & (x,y) \neq (0,0) \\ 0 & (x,y) = (0,0) \end{cases}$ is continuous at $(0,0)$  |
| 56. | A complex function $f(z)$ of complex variable $z$ for all values of $z$ in some neighborhood of $z_0$ is continuous at $z_0$ if <ul style="list-style-type: none"> <li>• <math>\lim_{z \rightarrow z_0} f(z)</math> Exists.</li> <li>• <math>f(z_0)</math> Exists.</li> <li>• <math>\lim_{z \rightarrow z_0} f(z) = f(z_0)</math></li> </ul>                                  |
| 57. | For every $\epsilon > 0$ there exist a $\delta > 0$ such that $ f(z) - L  < \epsilon$ whenever $0 < z - z_0 < \delta$<br>Where $\lim_{z \rightarrow z_0} f(z) = f(z_0) \implies \lim_{z \rightarrow z_0} f(z) = L$  |
| 58. | A complex function $f(z)$ of complex variable $z$ for all values of $z$ in some neighborhood of $z_0$ is continuous at $z_0$ if<br>$ f(z) - f(z_0)  < \epsilon$ whenever $0 < z - z_0 < \delta$   |

### Module # 30

|     |   |
|-----|---|
| 59. | Let a function $f(z) = u(x,y) + i v(x,y)$ be defined in some neighborhood of $z_0$ then $f$ is continuous at $z_0$ if   |
| 60. | If $f$ and $g$ are continuous at the point $z_0$ then the following functions are continuous at $z_0$ . <ul style="list-style-type: none"> <li>• The sum <math>f+g</math>, where <math>(f+g)(z)=f(z)+g(z)</math></li> <li>• The difference <math>f-g</math>, where <math>(f-g)(z)=f(z)-g(z)</math> □ The Product <math>fg</math>, where <math>(fg)(z)=f(z)g(z)</math></li> <li>• The quotient <math>\frac{f}{g}</math>, where <math>\left(\frac{f}{g}\right)(z) = \frac{f(z)}{g(z)}</math> provided <math>g(z) \neq 0</math></li> </ul> |
| 61. | Any polynomial $p(z) = a_0 + a_1z + a_2z^2 + \dots + a_nz^n (a_n \neq 0)$ is continuous at each point $Z_0$ in the complex plane.   |

|     |   |
|-----|---|
| 62. | $\lim_{z \rightarrow i} \frac{z^2+2}{z^2-2z+1} = \frac{1}{-2i}$ |
|-----|---|

### Module # 31

|     |  |
|-----|--|
| 63. | Consider two complex valued functions $f(z)$ and $g(z)$ then its composition is denoted by ' <b>g of (z)</b> ' a |
| 64. | If $f$ and $g$ are continuous at the point $z_0$ then ' <b>gof</b> ' is continuous at $z_0$ .                    |

### Module # 32

|     |   |
|-----|---|
| 65. | If a function $f(z)$ is continuous and non zero at a point $z_0$ then $f(z) \neq 0$ throughout some neighborhood  |
| 66. | If a function $f$ is continuous at throughout a region $R$ that is both closed and bounded then there exists $Z$ where equality holds for at least one such $Z$ . |

### Module # 33

|     |  |
|-----|--|
| 67. | The mapping $\frac{1}{z}$ is called the reciprocal function. In exponential notation it can be expressed as $z = re^{i\theta}$<br>Case 1: If $z$ lies on a unit circle.<br>Case 2: If $z$ lies outside the unit circle.<br>Case 3: If $z$ lies inside the unit circle. |
| 68. | Image of the half plane $\{z: \text{Re}(z) \geq \frac{1}{2}\}$ under the mapping $w = \frac{1}{z}$ is the closed disk i.e. $\{w:  w-1  \leq 1\}$   |
| 69. | For transformation $\frac{1}{z}$ image of portion of the half plane $\text{Re}(z) \geq \frac{1}{2}$ is inside the closed disk i.e. $\{z:  z  \leq 1\}$   |

### Module # 34

|     |   |
|-----|---|
| 70. | The derivative of ' $f$ ' at $x_0$ is written as $f'(x_0)$ and is defined as $f'(x_0) = \lim_{x \rightarrow x_0} \frac{f(x)-f(x_0)}{x-x_0}$ provided the limit exists.  |
| 71. | The derivative of $f$ at $z_0$ is written as $f'(z_0) = \lim_{z \rightarrow z_0} \frac{f(z)-f(z_0)}{z-z_0}$ provide the limit exists. The function $f$ is said to be differentiable at $z_0$ if the limit exists.             |
| 72. | If we write $\Delta_z = z - z_0$ , then the function $f'(z_0) = \lim_{z \rightarrow z_0} \frac{f(z)-f(z_0)}{z-z_0}$ can be expressed as $f'(z_0) = \lim_{\Delta_z \rightarrow 0} \frac{f(z_0 + \Delta_z) - f(z_0)}{\Delta_z}$ |

|     |  |
|-----|--|
| 73. | If we let $w=f(z)$ and $\Delta w = f(z) - f(z_0)$ then we can use the Leibniz notation $\frac{dw}{dz}$ for the derivative<br>Hence $f'(z_0) = \lim_{\Delta z \rightarrow 0} \frac{\Delta w}{\Delta z} = \lim_{\Delta z \rightarrow 0} \frac{f(z_0+\Delta z)-f(z_0)}{\Delta z}$ and often we drop the subscript $z_0$ and write the |
| 74. | If $f(z) = z^2$ then $f'(z) = 2z$ . <b>(PROVE IT-PAGE 66)</b>  |
| 75. | The function $f(z)=\text{Re}(z)$ is differentiable nowhere. <b>(PROVE IT-PAGE 67)</b>  |

#### Module # 35

|     |  |
|-----|--|
| 76. | Consider the real valued function $f(z)= z ^2$ . Find the points where $f(z)$ is differentiable. <b>(PROVE IT-</b> |
| 77. | If $f(z)$ is differentiable at $z_0$ then $f(z)$ is continuous at $z_0$ . <b>(PROVE IT-PAGE 73)</b>                |

#### Module # 36

|     |   |
|-----|---|
| 78. | Chain rule is useful when we want to differentiate composition of two functions.  |
| 79. | Given two functions $f(z)$ and $g(z)$ composition of $f$ and $g$ is given by; $f \circ g(z)=f(g(z))$ or<br>$\frac{d}{dz}(f(g(z))) = f'(g(z)) \cdot g'(z)$ |

#### Module # 37 - The Cauchy - Riemann Equations

|     |  |
|-----|--|
| 80. | Augustin-Louis Cauchy (French Mathematician, Engineer and Physicist - 21 March 1789 to 23 May 1859)  |
| 81. | Cauchy - Riemann equations are a pair of equations that first order partial derivative of the components satisfy at a point $(x_0, y_0)$ when derivative of $f$ exist there. |
| 82. | If Cauchy - Riemann equations are not satisfied at $z_0$ then function is not differentiable at $z_0$ .  |
| 83. | A Cauchy - Riemann equations are satisfied at a point $z_0$ then function may or may not be differentiable.  |

#### Module # 38

|     |   |
|-----|---|
| 84. | If $f(z)=f(x+iy)=u(x,y)+iv(x,y)$ differentiable at a point $z_0=x_0+iy_0$ then $u$ and $v$ satisfy Cauchy-Riemann equations<br>$U_x(x_0, y_0)=V_y(x_0, y_0)$ and $U_y(x_0, y_0)=-V_x(x_0, y_0)$ |
| 85. |   |

#### Module # 39

|     |  |
|-----|--|
| 86. | Let $(x_0, y_0)$ be an arbitrary point defined in some neighborhood of the point $Z_0 = x_0 + iy_0$ and suppose that<br>$U(x, y) = e^{-y} \cos x$ ----- $U_x(x, y) = -e^{-y} \sin x$ ----- $U_y(x, y) = -e^{-y} \cos x$ and $V(x, y) = e^{-y} \sin x$ ----- $V_x(x, y) = -e^{-y} \cos x$ |
| 87. | The above partial derivatives are continuous at $(X_0, Y_0)$ and satisfy Cauchy – Riemann equations $U_x = V_y$ and $U_y = -V_x$   |

| Module # 40 |  |
|-------------|--|
| 88.         |  |
| 89.         |  |

| Module # 41 |   |
|-------------|---|
| 90.         | A complex function $f$ is analytic at the point $Z_0$ provided there is some $\delta > 0$ such that $f'(z)$ exist in $ z - Z_0  < \delta$ |
| 91.         |   |

| Module # 42 |  |
|-------------|--|
| 92.         |  |
| 93.         |  |

| Module # 43 |  |
|-------------|--|
| 94.         |  |
| 95.         |  |

| Module # 44 |  |
|-------------|--|
| 96.         |  |
| 97.         |  |

| Module # 45 |   |
|-------------|---|
| 98.         | Harmonic Functions are real valued functions but they are very strongly related to complex valued functions.  |
| 99.         | <b>Harmonic Function Definition:</b> A real valued function $H$ of two variables $x$ and $y$ is said to be harmonic if the following conditions are satisfied by function;<br>1. Throughout the domain it has continuous partial derivatives of the first order and second order.<br>2. It satisfied following partial differential equation $H_{xx}(x, y) + H_{yy}(x, y) = 0$ or $\frac{\partial^2 H}{\partial x^2} + \frac{\partial^2 H}{\partial y^2} = 0$ |

|      |   |
|------|---|
| 100. | Notations: The sum $\frac{\partial^2 \varphi}{\partial x^2} + \frac{\partial^2 \varphi}{\partial y^2}$ of two partial derivatives is denoted by $\nabla^2 \varphi$ and is called the Laplacian. |
| 101. | Laplacian equation or sometimes known as Potential equation is $\nabla^2 \varphi = 0$ <b>(PREPARE EXAMPLE)</b>  |

#### Module # 46

|      |   |
|------|---|
| 102. | If a function $f(z) = u(x, y) + iv(x, y)$ is analytic in a domain D, then its component functions u and v satisfy Laplace's equations throughout D.   |
| 103. | <b>Harmonic Conjugate:</b> Let $u(x, y)$ and $v(x, y)$ are two functions such that $u(x, y)$ and $v(x, y)$ are harmonic functions throughout D then V is said to be harmonic conjugate of U in D. |
| 104. | A function $f(z) = U(x, y) + iv(x, y)$ is analytic in a domain D if and only if V is harmonic conjugate of U.   |
| 105. | The function $f(z) = z^2$ i.e $f(x+iy) = (x+iy)^2 = (x^2 - y^2) + i(2xy)$ is analytic everywhere. It means $U(x, y) = x^2 - y^2$ and $V(x, y) = 2xy$ are harmonic functions.                      |
| 106. | The function $2xy$ and $x^2 - y^2$ are harmonic functions but $f(x+iy) = (x+iy)^2 = (2xy) + i(x^2 - y^2)$ is not harmonic.  |

#### Module # 47

|      |  |
|------|--|
| 107. | Find Harmonic Conjugate of $U(x, y) = x^3 - 3xy^2 - 5y$ . <b>(PREPARE EXAMPLE - PAGE 32)</b> |
|------|--|

#### Module # 48

|      |  |
|------|--|
| 108. | Harmonic Functions are very important in applied mathematics for solving real life problems e.g. for fluid flow, heat conduction, etc. |
| 109. | Incompressible means density w.r.t time remains constant or density does not change with time and walls is zero.                       |
| 110. | An analytic function has analytic anti-derivative.   |
| 111. | The curves given by $\{(x, y): \varphi(x, y) = \text{constant}\}$ are called equi-potentials or stream lines.                          |
| 112. | For $F(x, y) = \varphi(x, y) + i\Psi(x, y)$ the component $\varphi(x, y)$ is harmonic also $\varphi_y = -\Psi_x$                       |

#### Module # 49

|      |   |
|------|---|
| 113. | <b>Sequence:</b> A sequence is any collection of objects, events or numbers that has some pattern that we can describe. |
| 114. | A sequence is a function whose domain is a positive integer and whose range is a subset of complex numbers.             |
| 115. | $f: \mathbb{Z}^+ \rightarrow \mathbb{C}$ or $f: \mathbb{N} \rightarrow \mathbb{C}$ is a sequence                        |
| 116. | Examples of complex valued sequence: $f_1(n) = n + i2n, n \in \mathbb{N}$   |
| 117. | A sequence is usually denoted as $\{Z_n\}_{n=1}^{\infty}$ OR $\{Z_n\}_1^{\infty}$                                       |

| Module # 50 |  |
|-------------|--|
| 118.        | A sequence is function from natural number to complex number.  |
| 119.        | <b>Limit of a sequence:</b> A sequence $\{X_n\}$ has P as its limit as n appochehes to infinity provided the te enough.        |
| 120.        | A sequence of real numbers $\{X_n\}$ converges of P if for every $\epsilon > 0$ there exist N such that $ X_n - P  < \epsilon$ |
| 121.        | A sequence of complex numbers $\{Z_n\}$ converges to if for each $\epsilon > 0$ there exist N scuh that $ Z_n -   < w$         |

| Module # 51 |   |
|-------------|---|
| 122.        | A complex sequence $\{Z_n\}$ is bounded provided that there exist a positive real number R and an inte              |
| 123.        | If $\{Z_n\}$ is a convergent sequence then $\{Z_n\}$ is bounded.  |
| 124.        | <b>Cauchy Sequence:</b> The sequence $\{Z_n\}$ is a Cauchy Sequence if for every $\epsilon > 0$ there is a positive |
| 125.        | $\{Z_n\}$ is a Cauchy Seqence if and only if $\{Z_n\}$ converges.   |

| Module # 52 |  |
|-------------|--|
| 126.        |  |
| 127.        |  |

| Module # 53 |  |
|-------------|--|
| 128.        |  |
| 129.        |  |

| Module # 54 |  |
|-------------|--|
| 130.        |  |
| 131.        |  |
